Built to teach. Rebuilt to *scale*.

How an EdTech platform stopped leaking learners, found its market, and turned course completions into a commercial engine — with **Stralchemistry**.

BACKGROUND

An EdTech platform offering skill-based courses for working professionals had built a solid content library and a growing free user base. But free wasn't converting to paid, paid wasn't renewing, and the team had no clear answer to the question every investor kept asking — what is your moat? The founders had deep domain expertise in education but were navigating commercial strategy blind.

Stralchemistry was brought in to bridge that gap and build a growth architecture around an already-strong product.

PAINPOINTS

A structured discovery process surfaced four barriers that were compounding quietly beneath the surface:

Free-to-paid conversion gap

Thousands of free users engaged with content but never converted. The platform had no structured conversion journey - no trial logic, no urgency, no clear value bridge between free and paid.

High drop-out, low completion

Course completion rates sat below 22%.

Learners enrolled with intent but disengaged within weeks.

The product had no re-engagement mechanism- and completion was the core proof of value.

Undefined audience, diluted message

Courses spanned too many verticals with no coherent narrative. The platform marketed to “anyone who wants to grow” - meaning it resonated with almost no one specifically enough to pay.

100% B2C dependency

Revenue came from entirely from individual learners - a high-churn, high-CAC model. No institutional or corporate channel existed despite the platform being directly relevant to workforce upskilling.

THE **STRALCHEMY** ENGAGEMENT

Stralchemy ran a focused 10-week engagement spanning market positioning, learner lifecycle design, and revenue diversification. Every output was handed over as an operational asset — not a slide deck.

1. Audience Focus & Positioning

Through competitive mapping and cohort analysis, **Stralchemy** helped the platform commit to a primary audience: early-to-mid career professionals in tech-adjacent roles seeking demonstrable skills. One positioning line replaced five generic ones — and the content strategy was realigned around it.

2. Conversion Funnel Redesign

A structured free-to-paid journey was built — a timed preview model, a value-demonstrating micro-course, and a contextual upgrade prompt triggered by engagement signals. Free users were no longer left to convert on willpower alone.

3. Learner Engagement System

Stralchemy designed a completion architecture — milestone nudges, cohort accountability groups, and a certification-linked outcome framework. Completion became a product feature, not an afterthought. Outcomes gave learners a reason to finish and the platform a proof point to market.

4. B2B Institutional Channel

A corporate upskilling proposition was packaged from existing content — a team licence model with admin dashboards and progress reporting.

Stralchemy identified three pilot enterprise partners and built the outreach playbook the sales team used to close them.

OUTCOMES

Sharper positioning, faster decisions

Website conversion rate rose 2.3x in 60 days of repositioning going live. Bounce rates dropped as the right audience self-selected in - and the wrong audience self-selected out.

Learners who actually finish

Completion rate climbed from 22% to 64%. Certified completers became the platform's strongest acquisition channel - peer referrals from outcome - proud learners outperformed paid ads within four months.

Paid enrolments at scale

Paid enrolments grew 4.1x over 10 months. The structured conversion funnel reduced time-to-purchase from 18 days to 6 - without discounting.

A second revenue stream live

Three enterprise clients were onboarded in the first quarter of the B2B launch. Institutional revenue grew to 38% of total within two quarters - fundamentally de-risking the business model.

"We were educators trying to run a business. **Stralchemistry** helped us become a business that educates - without losing what made us good at it in the first place."
